OUTLOOK:

Weather Discussion: High pressure ridge building over the West will produce a warming trend and decreasing winds in the Southwest. In the East, showers will extend from a low pressure system in the Great Lakes across the Ohio River Valley then southward along the cold front into Texas. Ahead of the cold front, warm dry weather along with some gusty winds is expected in Florida, Georgia and the Carolinas. In Alaska, winds over the Alaska Range will decrease as a low pressure system spreads showers over the interior and southern sections.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
SOUTHWEST AREA Mostly sunny and warmer.	60s and 70s mountains and north, 80s to mid 90s lower elevations south.	15-25% eastern NM and west TX, 5-15% remainder.	SW to SE 5-15 mph.
